2010 Annual Report

Swanton Village Manager – George H. Lague

Village of Swanton

George H. Lague, Swanton Village Manager -- 1988-2010

The Village of Swanton employees, along with past and present Board of Trustees, would like to thank George Lague for his 23 years of dedicated service to the Village of Swanton. His insight, leadership and expertise have brought the Village of Swanton to what it is today. The projects completed under his leadership are too numerous to mention but we wanted him to know how grateful we are. Not only did Swanton Village employees benefit from his leadership but also the Swanton Village taxpayers and ratepayers benefitted as well.

We wish you luck in any future endeavors and again thank you for your many years of dedicated service to the Village of Swanton.

Please Bring This Report to the Village Meeting

VILLAGE OF SWANTON ANNUAL WARNING

The legal voters of the Village of Swanton are hereby warned and notified to meet at the Swanton Village Complex, 120 First Street, Swanton, Vermont on Tuesday, March 1, 2011 at 7:00 a.m. to vote on the articles set forth. All articles are to be voted by Australian Ballot. The polls open at 7:00 a.m. and close at 7:00 p.m.

Article 1: To elect from the legal voters of said Village the following officers:

President for a 1 year term

Trustee for a 2 year term due to resignation

Trustee for a 3 year term Clerk for a 1 year term

Collector of Delinquent Taxes for a 1 year term

Article 2: Shall the voters of the Village of Swanton appropriate \$77,220 for the

operation and maintenance of the General Fund for 2011?

Article 3: Shall the voters of the Village of Swanton appropriate \$410,011 for the operation and

maintenance of the Highway Department for 2011?

Article 4: Shall the voters of the Village of Swanton appropriate \$43,182 for the operation and

maintenance of the Fire Department for 2011?

Article 5: Shall the voters of the Village of Swanton appropriate \$456,259 for the operation and

maintenance of the Police Department for 2011?

Article 6: Shall the voters of the Village of Swanton authorize the Trustees to place any

surplus funds within individual departments into the capital fund of said

department?

Article 7: Shall the voters of the Village of Swanton authorize the Trustees to borrow funds in

anticipation of taxes?

The legal voters of the Village of Swanton are further notified that an Informational Meeting will be held at the Swanton Village Complex on Monday, February 28, 2011 at 7:00 PM for the purpose of explaining all of the Budget items to the voters.

Dated at Swanton, Vermont this 24th day of January 2011.

VILLAGE TRUSTEES AND MANAGER'S REPORT

In 2010, as in the past, there were many new challenges for the Village of Swanton. First of all, we wish to thank the voters for their approval of the bond required to upgrade the Water Treatment Plant. The engineering firm of Aldrich & Elliott are still working on their studies with the intention of going out to bid in Spring 2011. The proposed upgrade will allow for a new filter to be installed and the present filter to be replaced. Each of the new filters will be capable of providing the daily requirements of the community. There will also be a third lagoon added, a SCADA control system added along with energy efficiency upgrades.

One disappointment is that our congressional delegation has informed us that no grant funding is available to reduce debt borrowing as a result of these plant upgrades.

The hydro electric plant continues to be a financial benefit for the Village and its ratepayers. The voter approved refinancing of our current electrical bond visualized a savings of over 1 million dollars for the remaining life of the bond. Current electric rates were raised by 16.34% with the approval of the Public Service Board to compensate for the increase in purchase power costs, capital improvements and other operational expenses.

Voter approval was also received to install a fifth generator at the Orman Croft Generating Facility. A 750 kilowatt generator will be installed in an existing power house to capture the minimum flow waters required to meet FERC specifications. It will produce just under 100 KW when low flow conditions exist and around 600 KW when an abundant supply of water exists. This will help to stabilize future rates.

We produce between 70 to 80 percent of our energy needs but some of the existing power contracts will expire in the near future and must be replaced with new power contracts most assuredly at a higher rate. We do not foresee Swanton Village going another 17 years at our present rate structure.

The original micro processor controllers on the power generators are being replaced, allowing the operators to shut down one generator instead of all four. Planned maintenance is a primary objective of our hydro staff. Penstock inspections and rack raking facilities upgrades allow for a continued productive operation.

Improvements to our SCADA system allow for improved monitoring and control of our substations and also allows our operators to interface and control the Project 10 site.

Remote camera viewing has been installed in two substations and is projected for the third substation. Our Leader substation is also designated for fiber optic cable installation to allow for remote operation and control.

A backup station service was installed at the hydro power plant. This will enable us to provide power from an alternative source should the Highgate Substation experience a loss of power. The aging three phase primary underground cables in the Industrial Park were replaced and an

overhead three phase line constructed on Route 78 West to allow for alternative feeds to the Industrial customers.

Our aggressive tree trimming and vegetation control programs continue to show benefits and our power interruption number reported to the State remain very good. Upgrades to our system continue to improve our ability to provide a high level of service to all our customers.

The Highway Department was busy installing 600 feet of storm drains on Grand Avenue and a new storm line on Blake Street. New catch basins were installed in the Municipal Complex to correct the drainage issues that have plagued the building in the past. We are working with the State on exploring a possible retention pond for storm water at Marble Mill Park. This is possible because of a grant for the study provided by the State. Two hydrants were replaced and the others were serviced, including painting. Paving money is reserved from the 2010 budget to combine it with the 2011 budget to do a shim and overlay on First Street. This will require many structures and water valve boxes to be worked on in preparation for this project. Sidewalks were rebuilt on Dunning Street, Broadway Street, York Street and First Street.

At the Waste Water Plant the lab passed the EPA DMR-QA laboratory quality assurance test. They drained and cleaned the sludge thickener tanks, and reconditioned the portable emergency generator that is set up for the Bells Pump Station. Also 375 cubic yards of bio-solids were applied at our land on Route 207. The chemical feed pumps were replaced with peristaltic units. We have been working with Efficiency Vermont towards new lighting and a new ultra violet disinfection system. The plant continues to work well but some things are beginning to show their age.

We'd also like to mention that the office staff is very close to completing their conversion of the billing system. Pieces of that new system have been up and running and in use for over a year but the final stages are nearing the end. Our customers will now receive one bill each month with electric, water and sewer rates all on one bill. The conversion has been a very difficult and lengthy process but they are almost complete and we thank the staff for all their hard work.

We wish to thank the voters and the ratepayers for their continued support. We also wish to thank the employees for their hard work and dedication.

Respectfully Submitted,

George H. Lague, Village Manager Neal Speer, Village President Chris Leach, Trustee Suzanne Washburn, Trustee Eugene LaBombard, Trustee

SWANTON VILLAGE FIRE DEPARTMENT

Est. 1889 P.O. Box 279 Swanton, VT 05488 Non-emergency Station (802)-868-3363 Village Fax (802)-868-3930

The year 2010 saw call volumes increase to be the second highest call volume the department has ever had. We responded to 234 calls in 2010 compared to 191 in 2009 or 43 more calls. This is a 22.5% increase in call volume from 2009 to 2010. They included two major fires in the Village apartment building fires, one on Merchants Row and the other on Canada Street.

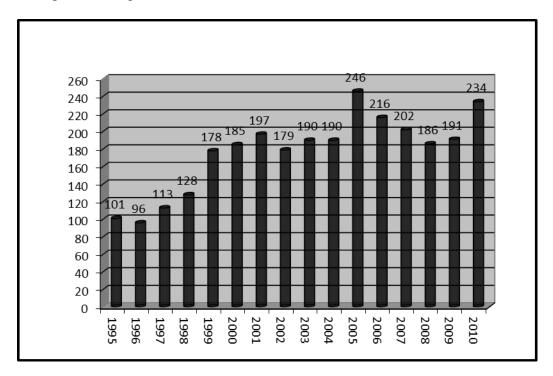

We are requesting just a \$343.00 increase (0.2%, two tenths of one percent) from 2010 to 2011 in our budget. This is the last year that we will be able to postpone purchases due to the economic situation and not have major long term impacts to our department and your tax bill.

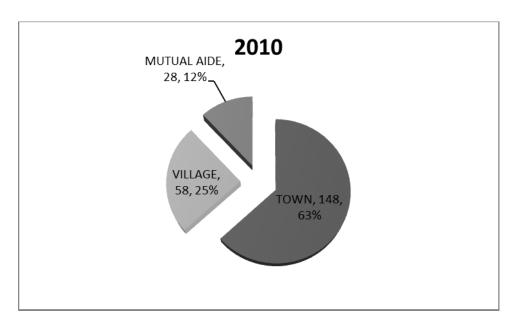

Our call numbers for 2010 are as follows:

We responded to: 85- Motor Vehicle Accidents, 30- Fire Alarms, 27- Structure Fires (Anything in, on, or attached to a building.), 4-Hazardous Materials Incidents, 16- Grass Fires, 2 - Garbage Burning, 1-No Pay Documentations, 8 – MVR Assists, 9 – Water / Ice Rescue, 34- Good Intent, 13 – Carbon Monoxide Alarms, 5- Vehicle fires. This totals 234 calls. Twenty-eight (28) of these were Mutual Aide Responses to assist other town's usually larger structure fires. We received mutual aide on four (4) occasions.

YEAR	MVA	Alarm	Structure	Hazmat	Grass	Garbage	No Pay	MVR	WATER	G.I.	СО	Vehicle	Combined Total
2010	85	30	27	4	16	2	1	8	9	34	13	5	234 - 2010
2009	83	17	26	4	9	3	0	6	6	22	9	5	191 - 2009
2008	56	32	24	2	13	6	0	9	2	26	12	4	186 - 2008
2007	70	15	27	12	13	3	0	5	*	21	21	14	202 - 2007
2006	85	17	37	8	18	8	3	3	*	27	7	5	216 -2006
2005	88	22	27	12	18	8	6	3	*	39	19	4	246 - 2005
2004	64	19	31	8	6	13	3	2	*	27	8	9	190 - 2004
2003	75	7	33	3	17	5	3	7	*	26	3	11	190 - 2003
2002	74	12	24	5	10	4	6	4	*	24	3	14	179 - 2002
2001	46	31	35	13	32	7	8	4	*	12	5	4	197 - 2001
2000	55	28	35	5	13	11	11	0	*	15	4	8	185 - 2000
1999	37	30	48	8	24	12	4	1	*	0	3	11	178 - 1999

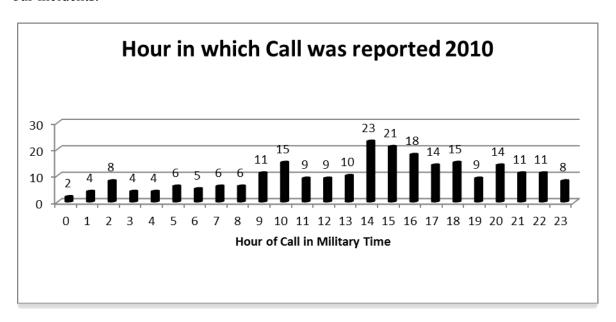

I have plotted out the call volume totals since 1995 and have included them in the graph below. It shows that the volumes did go down for a couple years during the economic down turn but have gone back up.

Above is a pie chart showing whether the calls were in the Town, Village or requests for Mutual Aide to another town in 2010.

I have plotted the hour that the tones sounded for our response in a graph to see when the majority of our calls are coming in. In the graph below you will find that 166 of the 234 calls occurred between the hours of 7 am and 7 pm. This makes sense that the majority of our incidents occur when people are up and more active. This also brings to light that we have some dedicated responders that have made themselves available during these same hours. We need to thank them for choosing to work nights and weekends so that people are available to respond to our incidents.

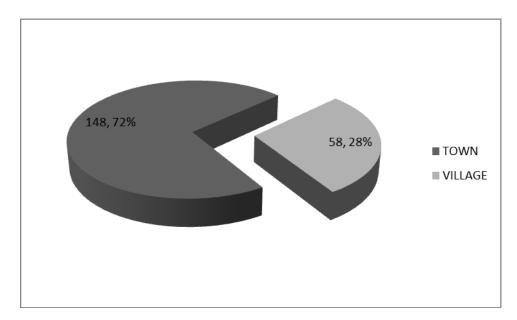

As proposed the Fire Department Budget has an increase of \$343.00 over 2010. The total Fire Department funding request is one of the smallest portions of your total property tax bill.

I have been Fire Chief since 1997 and I have been asked the question on how the Town vs. Village split is determined many times. I hope to explain how the split is calculated so you can understand. In calculating the Town vs. Village assessment, the Fire Department 2011 budget of \$189,905 is reduced by budgeted revenue, interest \$450, miscellaneous billings \$5,000 and payment in lieu of taxes \$743. The net, \$183,712 is to be split between the Town and Village.

The assessment split is calculated based upon the grand list of the Town and Village. A 5 year average of the Town and Village Grand List is used to calculate the percentage applied to the net budget. (\$183,712) Currently, for 2011, the Town assessment is 74% of the budget and the Village is assessed 26% of the budget. This is because 74% of the property in <u>ALL</u> of Swanton is located in the Town and 26% of the property in <u>ALL</u> of Swanton is located in the Village. As a second or sanity check, this percentage is also compared to the FD number of calls in the Town vs. the number of calls in the Village. Over many years, this comparison has shown that the use of the Grand List is more consistent for keeping both the Town and Village Taxpayers paying similar Fire Protection tax assessments on similarly valued property whether they live in the

Town or the Village. From one year to the next the number of calls may shift higher to the Town and the next year it may shift higher to the Village. Essentially the Fire Department protects the Grand List and splitting the budget on what is being protected is the fair way of doing it.

In these challenging economic times hard choices were made to come up with the budget. I will try to highlight the changes and explain the reasoning for the items in the budget and how they were arrived at.

Item: Dispatching / Communications: We have seen an increase in our Dispatching costs due to cost increases incurred by St Albans Central Dispatch. Their proposed budget has had increases in contractual Employee benefit costs.

Being that the combined Town and Village of Swanton are one of the largest populations in Franklin County, second to only St Albans City, we have a large portion of the User costs of dispatch. As proposed, Swanton's share of Dispatching will be just over \$40,000.00. This is for Emergency Dispatching for Swanton Fire and Missisquoi Valley Rescue (Swanton Calls). It is then further split between the Fire Department and Rescue Squad on usage (by Swanton). The Rescue Squad has a higher number of calls than the Fire Department and pays a higher percentage of the Dispatching Costs billed to Swanton.

We have looked at the costs and we cannot maintain an always-staffed facility for emergency dispatch for \$40,000.00 a year. The proposed St Albans Dispatch budget for their 2011 Fiscal year is over \$500,000.00. We are being asked to pay \$40,000.00 of that \$500,000.00+ cost. It is not something that can be done on a shoestring. This is split between the Fire Department Budget and Missisquoi Valley Rescue's overall budget. (Taxes and Billing) Bottom line this is an expense that we MUST have and cannot do it cheaper ourselves so we must make this work.

Item: Training: We have decreased the training budget line item to \$2,000.00 from \$3,500.00. We had increased this to allow us to send our firefighters to classes at County or Regional Fire Schools. Due to availability and other factors we did not spend the entire amount. So we have

reduced that closer to our actual costs which were still more than the \$1,000.00 we had previously budgeted.

Many of the Fire School classes are now \$90.00 to \$100.00 per student per class on a weekend. This limits the available training opportunities for the firefighters to just 10 per year for the entire department. We have been fortunate that Vermont Fire Service Training has funded the needed Firefighter One classes. Most other outside trainings cost money. I do not feel it is acceptable to ask the person who is giving up his or her time to also pay \$100.00 for the class fees on top of all the expenses of going to the class out of Swanton.

Item: Maintenance / Operation of Trucks & Equipment: We were again over budget on this item. I have asked the Officer that oversees the trucks to give an estimate of what will be needed in 2011. He has projected at least a \$5,000.00 increase is needed. I have put that in to the budget plan for 2011. The age of our apparatus is requiring more repairs.

Item: Miscellaneous Equipment: This line item has been decreased approximately \$1,500.00. This was done to try to keep the overall budget down. It is a line item that will need to be increased in the future without a doubt.

Item: Personal Protective Equipment: We are trying to keep this line item at a level that we can keep our firefighters safe without breaking the bank. Our past investments are allowing this to happen.

Item: Capital Truck Fund: I did propose to put any money into a Capital Truck Fund for a down payment on a purchase in 2012. I have been including in this report and telling the Board of Trustees and Selectmen that the situation is critical since 2004. We requested that we purchase two trucks at that time which were not approved by the voters. We did receive approval for the purchase of one truck in 2006.

The truck we want to replace is 35 years old. At the time of writing this report, this truck is scheduled for repairs due to a failed State Vehicle Inspection. The repairs are estimated to cost in excess of \$1,000.00. It is past time to replace the truck.

The rest of the trucks are getting older and will need to be replaced soon. The following table shows the trucks' age and year that we should be replacing them to keep the fleet less than twenty (20) years old. The one exception being, the Ladder truck replacement is at twenty-five (25) years old.

			ENGINE		ENGINE	
ENGINE2	LADDER4	TANKER1	3	UTILITY6	1	
						Model year
1976	1989	1995	1999	2005	2006	of Truck
						Replacement
1996	2014	2015	2019	2025	2026	Year Target

In 2009, new NFPA standards changed requirements for all apparatus built after January 1, 2009.

In 2010, new EPA regulations required diesel engine emissions to be stricter. Both of these will drive price increases to apparatus. These are just a few of the items to be taken into account when planning for the next fire apparatus purchase.

The following are issues that I want to bring to your attention:

Fire Prevention: We were active in the community with Fire Prevention again this year. We were able to visit the Schools with our annual visit to the Elementary schools again in 2010. We saw over 600+ students' preschool to 6th grade in 2010. Our visits were shifted away from the Official Fire Prevention Week so to not interfere with the NECAP testing that the students were required to take. We did not have The Annual Fire Prevention Week Pizza Party this year due to time and scheduling conflicts.

We worked with the Village Police on National Night Out that the Village Police organized in the Village Green. It was an excellent effort by all agencies involved to get the Public Safety message out to our community.

Please remember that everyone must have TWO ways out of every room and ONE meeting place for the entire family.

Carbon Monoxide Alarms: CO is a colorless odorless gas that can kill. It is given off by combustion, or in other words by burning something. New energy efficient homes are tighter and trap this deadly gas in your home. You should read the directions that come with your CO detector and follow the directions on how to maintain it. It should be checked following the manufacturer's instructions just like you would check and maintain a smoke detector.

Please learn from others mistakes: <u>Do NOT</u> run your car, motorcycle, snowmobile, four wheeler, generator, and chainsaw inside or inside your attached garage. <u>Do NOT</u> allow your furnace, wood stove, pellet stove, gas hot water heater to have their vents get plugged. <u>Do NOT</u> run your gas or charcoal grill or smoker inside or inside your garage.

Burning: Please think before you burn. It is illegal to burn anything but untreated wood, leaves or grass. You should also think of your neighbors and any health issues they may have. The saying do unto others as you would have done to you is appropriate. Before burning, you need to get a burn permit by contacting the Town Fire Warden Jon Barrette. If you don't follow these rules, we will be forced to contact our Town Health Officer. There are ordinances in place to deal with these and possibly fine the person or business involved that the Health Officer has at his disposal.

In closing, the country is still in uncertain times. Our firefighters responded to major fires both in and out of Swanton in 2010. Giving them the tools and equipment to respond to "Our Emergencies" is part of what is needed to keep them motivated and safe.

On behalf of the members of the Fire Department, I wish long time Village Manager George Lague best wishes in retirement. We can only hope that his replacement will be as supportive of the main goals of the Fire Department as George has been.

I would like to take this opportunity to thank the Town and Village employees, especially the Public Works, Electric, Police Department and Office, for their assistance over the last year. Without their cooperation, our job would be harder and likely more expensive to accomplish.

On behalf of the members of the fire department, I would like to thank you for your support and ask that everyone to be FIRE SAFE. We are YOUR fire department whether you live in the Town or Village; We are the **SWANTON FIRE DEPARTMENT**.

Sincerely,

Peter W. Prouty Chief S.V.F.D.

Petul Prouty

Fire Department Roster as of January 16, 2011:

Chief Peter Prouty, 1st Asst. Chief Rick King, 2nd Asst. Chief Travis Greeno, Captain Jason Butler, Lieutenant Edward Ferguson, Lieutenant John Greer, Jon Barrette, Reginald Beliveau Jr, Daniel Billado, Alex Bourdeau, Christian Conger, CJ Constantine, Jason Corbiere, Dan Chevalier, Jason Cross, Cody Domey, Mike Farrar, Greg Gaudette, Donald Gilbert, Timothy Girard, Ronald Greeno, James Hull, Albert Kinzinger, Garth Lizotte, Jason Marchand, Josh Ramsdale, Brian Savage, Jodie Schuster, Nick Schuster, Neal Speer, Bruce Whalen, and Ronald Young Jr.

SWANTON VILLAGE POLICE DEPARTMENT

We have hired Chad Parah as a full time Police Officer and he started working for Swanton Village full time in December of 2010.

The Department, which comprises of a team of six full time personnel and four part time officers, have made great strides to reduce crime and apprehend those responsible.

The Swanton Village Police Department received a COPS grant which allowed us to form a partnership with Missisquoi Valley Union High School. This partnership provides for a fulltime School Resource Officer. This is Swanton Village's second year in over seeing the SRO program at MVU. The SRO program is working with the school administration and looking at new ways to improve the program. This relationship has allowed Swanton Village Police Department to manage some of our juvenile complaints with greater efficiency.

The Department responded to 1531 calls for service in 2010 and issued 144 motor vehicle tickets as well as 120 motor vehicle warnings. We also handled 32 additional parking problems.

Over the course of the year we conducted 7 Search Warrants as the result of Drug Investigations which were done under the Leadership of Lt. Begnoche. The drug investigations' and search warrants lead to the arrest of several people.

The Police Department has been working to integrate a full Community Oriented Policing Strategy and we are here to serve the community. We strongly believe that in this day and age crime control must be augmented with community-based strategies that help prevent neighborhood crime, reduce fear, and enhance the quality of life in Swanton. When the community members' work together in partnership with law enforcement, we can identify underlying causes and search for the best ways to solve our local problems. Crime can seep into our community--changing our neighborhoods, frightening our senior citizens, and influencing our children. We need to take action to find the best ways to address these concerns before serious problems begin. By working together we can establish a lasting partnership that will benefit everyone.

The Swanton Village Police Department organized a National Night Out event in the Village Green and it was held on August 3, 2010. This event would not have been possible without the support of all of the participants. This past year we had live entertainment and hope to make this years National Night Out even better.

Our Department placed 4th in the State Wide Law Enforcement Challenge. The Challenge is based on training the officer received and the effectiveness of motor vehicle safety within the community.

We also conducted an extensive speed survey of the area streets which has changed our focus on motor vehicle enforcement. The survey breaks down the average speed for a street and the times

that most of the speeding violations occur. Using this new data Officers are targeting the areas with the greatest number of violations.

Members of the Police Department can be reached by calling 868-4100. As always if you have any questions please call the Police Department, we are here to help you.

Respectfully Submitted, Leonard Stell Chief of Police

BASIC FINANCIAL STATEMENTS INDEPENDENT AUDITOR'S REPORT MANAGEMENT'S DISCUSSION AND ANALYSIS December 31, 2010

The Village of Swanton was audited by Kittell, Branagan & Sargent, an independent auditing firm, for the year ending December 31, 2010. To view this report in full stop by the Swanton Village Office, Monday thru Friday, 7:30 a.m. to 4:00 p.m. or call 868-3397 to request a copy.

Thank You Village of Swanton Management

2011 Resource Report for

Village of Swanton Electric Department

PO Box 279 Swanton, VT 05488

Phone (802) 868-3397 Fax (802) 868-3930

1) Executive Summary

The Village of Swanton Electric Department (Swanton) submits the following report to the Vermont Public Service Board and the Department of Public Service in compliance with Rule 5.206 (B), *Reporting Power Supply Transactions*. The information contained within this report summarizes Swanton's power supply needs and acquisition strategy. This report also summarizes resource transactions the utility expects to enter during the next 5 years.

Swanton relies on the Vermont Public Power Supply Authority (VPPSA) for its interactions with the ISO-NE and New England power markets. In addition to managing resources in the New England markets, VPPSA also explores new generation sources for its members. Examples of generation resources being reviewed include wind facilities in East Haven, VT, and Jacksonville, VT, hydroelectric and landfill methane resources in neighboring states, and proposals for new HQ and VY contracts. Additionally the 40MW peaking facility (Project 10) has synchronized to the ISO-NE grid and is commercially operational.

2) Utility Information

In 2010, Swanton's load requirements in the New England markets were 58,152,153 kWh. It reached a peak of 11,210 kw on 7/8/2010 at hour ending 14:00. Over the past several years, Swanton's load has fluctuated and is summarized in the following table.

Year	Load Obligation in	Percent Increase
	New England	(Decrease)
	Market (kwh)	
2006	54,454,350	

2007	58,116,713	6.30%
2008	58,486,773	0.63%
2009	57,611,983	-1.52%
2010	58,152,153	0.93%

Swanton's energy needs are projected into the future based on past load trends, weather, and known customer changes. Updated load forecast are completed regularly in an effort to refine Swanton's future energy need estimates. To follow is a summary of Swanton's forecasted energy requirements from 2011 to 2015.

Year	Load Obligation in New	Percent Increase (Decrease)
	England Market (kwh)	
2011	58,429,783	0.48%
2012	58,533,472	0.18%
2013	57,239,833	-2.26%
2014	56,930,220	-0.54%
2015	56,957,054	0.05%

3) Market Conditions and New England Wholesale Price of Electricity

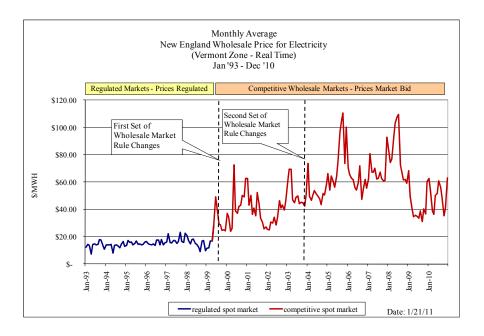

Wholesale Markets

Wholesale electricity costs have become extremely volatile with the advent of restructured wholesale energy markets. Changes to the power market in 1999 included implementation of competitive bidding practices for electric power plants in the New England system. Prior to 1999 power plant offers were fully regulated and required bidding based on fuel costs alone. In May, 1999 restrictions on power plant bid structure were lifted allowing submission of figures based on true total costs and market demand. Plants are selected to run in economic order from lowest bid to highest. Today competitive market forces set wholesale prices based on equilibrium between supply and demand.

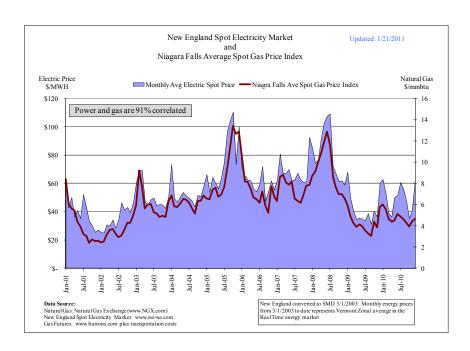

In March, 2003 additional changes occurred; these changes are referred to as "Standard Market Design." This set of rules established various clearing points on the New England transmission system ("grid") in order to send accurate price signals regarding supply and demand

at different locations throughout Vermont and New England. The system helps identify congested areas and spur infrastructure investment and demand side management.

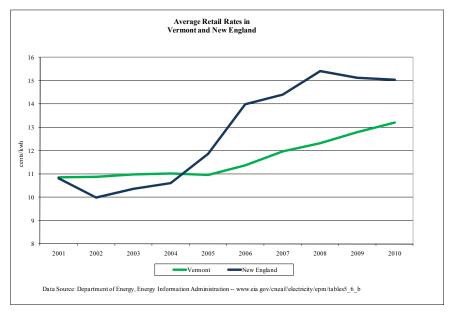

The following chart displays Vermont's real time wholesale monthly average energy costs over the last several years. Significant changes to market rules are identified by dashed vertical lines in the chart. After the implementation of new market rules wholesale power market prices have experienced both substantial rises and falls resulting in considerable volatility. This has produced instability and a lack of predictability in utility power portfolios and associated power costs.

The next chart shows the relationship between spot market electricity prices in New England and wholesale natural gas prices. Natural gas is considered the primary feedstock for electrical power generators in the New England market and as a result the relationship between the price of natural gas and electrical power is strong -- over the past ten years there has been a 91% correlation. During 2010 gas and electricity prices have remained relatively low due largely to increased supply of natural gas in U.S. markets and ongoing effects of global economic recession.

The following chart shows the average retail electric rates in Vermont compared to other New England states. On the aggregate level Vermont's rates are below average retail rates for the rest of New England. Among the reasons for the gap since 2004 is Vermont's decision not to deregulate its electric industry. Customers in Vermont receive significant portions of their power from long term stably priced contracts whereas customers in the rest of New England is more exposed to wholesale market price changes.

4) Existing Resources

Swanton's power supply portfolio is made up of generation resources, long-term contracts, and short-term contracts. The diversified portfolio acts as means to financially hedge the cost of serving load at the Vermont Zone in the ISO-NE market system. Swanton's current supply mix is summarized in the following table, including a brief description of each resource.

Resource	2010 UCAP	2010 Kwh	Type	Description	Fuel	Location	Expiration

McNeil

The McNeil wood-fired generating facility is located in Burlington, Vermont. The facility has a maximum generating capability of 54 MW. Swanton's entitlement to McNeil is provided through an agreement with the Vermont Public Power Supply Authority for the life of the power plant. Swanton expects the generation to be mostly composed of wood, but natural gas is used periodically as an alternate fuel source and for start up. Oil is also available and is used primarily as a start up fuel source.

New York Power Authority (NYPA)

The New York Power Authority provides inexpensive, hydroelectric power to the utilities in Vermont under two contracts. The first contract is a 1,000 kW entitlement to the Robert Moses Project (a.k.a. "St. Lawrence") located in Massena, New York. The second contract, known as the "Niagara Contract," is for a 14,300 kW entitlement to the Niagara Project located at Niagara Falls, New York. The contract for St. Lawrence has been extended through April 30, 2017. The Niagara Contract has been extended through September 1, 2025.

Vermont Electric Power Producers, Inc. (VEPPI)

Swanton receives power from several independent power projects (IPP) through a state mandated arrangement administered by the Rule 4.100 appointed purchasing agent. All current IPP generation resources in Vermont are hydro with one exception for a wood fired biomass generator. Vermont Electric Power Producers, Inc. (VEPPI) assigns power to all Vermont utilities under Vermont Public Service Board ("PSB") Rule 4.100 based on a pro-rata share of electric sales which is updated annually. Contracts between VEPPI and its constituent power producers began to terminate in 2008. The last VEPPI contract is scheduled to end in 2020.

Stony Brook Combined Cycle Facility

Swanton holds an entitlement in Stony Brook. The Stony Brook facility is a dual fuel facility located in Massachusetts which is comprised of three generating units. While this facility has the capability of generating electricity from fuel oil, natural gas is the primary source of fuel. The Stony Brook owners completed construction of a gas pipeline extension which enables the facility to operate multiple units on natural gas. During winter the facility's generation is a mix of natural gas and oil due to the inability to fully procure natural gas for peak periods.

Swanton Hydro (Highgate Hydro)

Swanton's "run-of-the-river" hydroelectric facility is located in Swanton, Vermont. Swanton owns the facility and currently utilizes all of its output. In 2010 the hydro facility

produced 51,966 mWh with an annual capacity factor of approximately 62%. Over the past ten years the unit has averaged 47,535 mWh per year.

Standard Offer

Swanton receives power from several independent power producers according to the state mandate set forth in the Vermont Energy Act of 2009 (i.e. Act 45) which is administered by the SPEED facilitator. The prices paid to developers under Act 45 are standardized based on the type of renewable energy technology. Swanton receives a share of all Standard Offer contracts based on its pro rata share of Vermont's prior year kWh sales. Duration of standard offer contracts is permitted to be between 10 and 20 years, except in the case of solar which is permitted to contract for 25 years.

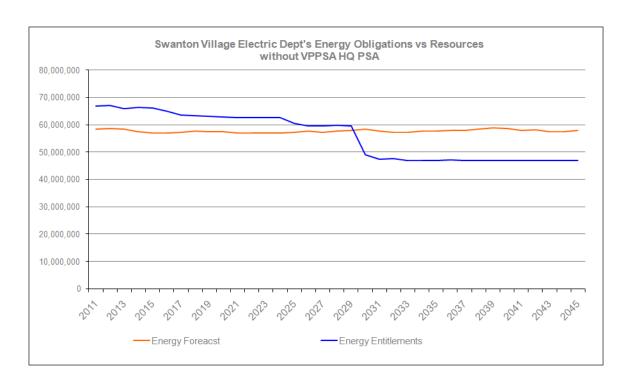

Market Purchases

Swanton meets the remainder of its load obligations through ISO-NE's day-ahead and real-time energy markets, physical bilateral transactions and financial transactions. Swanton automatically participates in the wholesale markets through its ISO-NE settlement. Additionally short-term transactions are made periodically to adjust the portfolio in an effort to match resources to Swanton's load obligations. Market purchases range in size, duration, and by provider and can be transacted in small amounts. It should be noted that if purchases are longer than five years the transaction requires Vermont Public Service Board approval. At this time all market purchase contracts have been less than five years in duration.

5) Market Position

Energy

Presented below is a graph of Swanton's projected energy resources, available from existing contracts and generating plants, from 2011 through 2045. On the same graph is a forecast of load that Swanton expects to serve over the same period. It should be noted that energy is the largest component of a utility's power costs. Below the chart is a summary of major milestones that occur related to Swanton's sources of power.

Major Energy Milestones

- Market Contracts expiring in the first one to five years
- Entergy energy contract expired December 2010 1,526kW
- Standard Offer contract deliveries began in 2010

Note the relationship between forecasted energy needs and Swanton's power supply resources. Gaps represent an under (or over) commitment of power resources as compared to projected load. As supply falls below load Swanton will acquire new resources that meet the utility's decision making criteria. A growing distance between the two lines is a normal part of the utility business as existing contracts expire over time. VPPSA continually evaluates power markets on Swanton's behalf for economical methods to address future energy needs.

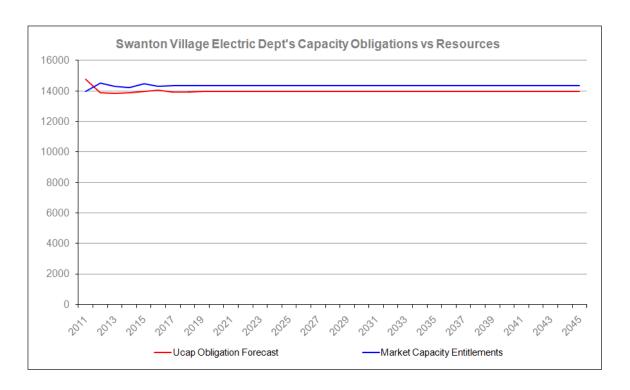

6) Capacity Position

Capacity

Capacity is the second largest cost driver in a utility's power costs. Capacity represents the capability to generate electricity. In broad terms capacity is important in providing reliability and avoiding price spikes during peak demand periods.

The graph below shows the utility's capacity available from existing resources compared to its projected capacity requirements as a participant in ISO-NE wholesale markets.

Swanton voted to participate in the Swanton peaking facility (Project 10) which came into service in 2010. Swanton's capacity graph shows Swanton's capacity obligations and resources including the peaking facility. Below the chart is a summary of major milestones that occur related to Swanton's sources of power.

Major Capacity Milestones

- Addition of Project 10 in 2010 4,677 kW
- New Forward Capacity Market Rules started in 2010

Forward Capacity Market

The Forward Capacity Market is a new market for capacity that began in June 2010. Swanton's generation will be credited at the auction clearing price for the commitment period. Conversely Swanton will be charged based on its load obligation coincident to New England's peak. Historically the price of capacity was set by a FERC approved agreement and ranged from \$3.05 per kW per month in December 2006 to \$4.10 by May 2010. After that time an auction process set the price. The first auction took place in February, 2008. The results from this auction set a new price for capacity for the period June, 2010 to May, 2011 (capacity cleared at \$4.50)

kw-mo in the first auction). A second auction was held and set a new price for capacity for June, 2011 to May, 2012 (capacity cleared at \$3.60 kw-mo in the second auction). A third auction was held in October, 2009 for the period June, 2012 to May 2013 in which capacity cleared at \$2.95 kw-mo. The most recent auction was held in August, 2010 for the period June, 2013 to May, 2014 when capacity cleared at \$2.95 kw-mo.

7) Future Long-Term Resources

Future Resources

VPPSA assists Swanton in seeking resources to replace existing long-term resources. At this time VPPSA has negotiated for the purchase of output from several power projects that are in the planning and development stages as well as for other long term contractual opportunities. To follow is a summary of long term sources of power.

Project 10

Swanton held a municipal vote to authorize the execution of a Power Sales Agreement (PSA) with the Vermont Public Power Supply Authority for 11.94% of the output from a 40 MW peaking facility constructed in Swanton, Vermont. Eleven municipal utilities have signed Purchase Sales Agreements for the project which came online in 2010.

The project constructed 40 MW of peaking generating capacity. This generating capacity is designed to provide reliability services to the participating municipal utilities at prices below projected market prices for the Forward Capacity Market, Forward Reserve Markets, and Black Start. In addition, the units will run during peak price times to mitigate price spikes that occur when New England loads reach peak levels in the summer and winter. The Power Sales Agreement was filed with the Vermont PSB for Rule 5.200 notice in February, 2007.

Hydro Quebec

Negotiations with Hydro Quebec began in early 2008 and have continued intermittently for a new contract to begin when the existing contracts with Vermont utilities start to expire. At this time Hydro Quebec has distributed a confidential offer to the Vermont Utilities. The Public Service Board has recently heard testimony on the contract. The goal of such long-term resource

options is to reduce future price volatility and market uncertainty by reducing reliance on short duration market purchases.

Entergy/Vermont Yankee

Discussions are being held with the owner of the Vermont Yankee nuclear power plant (Entergy) and the state's two largest utilities for the ability to purchase power after 2012. VPPSA has received an offer from Entergy for a portion of the output from Vermont Yankee and is currently evaluating this resource.

East Mountain

VPPSA continues to explore the financial and practical feasibility of constructing a wind project on East Mountain in East Haven, Vermont. The estimated size of the project is between 8 and 12 MW.

Brockton Clean Power

VPPSA has been approached by developers of a large natural gas plant in Brockton, Massachusetts. Construction is scheduled to begin on the 350MW combined cycle plant in 2011. A relationship with this type of generator would help provide long term power supply predictability.

Ampersand Gilman Biomass

Discussions are being held with Ampersand Energy Partners for the output from a biomass plant at the former Gilman Mill site in Gilman, Vermont. The project is scheduled to replace an existing biomass generator with a larger, more efficient unit. Total output from the new generator is expected to be between 8 and 16 MW. There is additional hydroelectric generation onsite which may play an additional role.

Messalonskee Hydro

Negotiations are underway with for the purchase of power output from hydroelectric generators on the Messalonskee Stream. The Messalonskee Stream is a tributary of Kennebec River in Kennebec County, Maine and contains three generating facilities along the stream.

Impounding facilities above the upstream-most generator enhance the ability of the three generators to provide more consistent and more reliable generating ability.

Fitchburg Landfill Methane

Negotiations are underway for the purchase of power output from an existing landfill methane generator at the Fitchburg Solid Waste facility in Westminster, Massachusetts. This project would provide reliable, renewable energy.

8) Anticipated Resource Transactions

Planned Purchasing

In order to make its members' power costs more predictable, VPPSA implemented a plan to purchase power using a systematic power purchasing technique. In order to avoid uncertainty and volatile swings of frequent market purchases, Swanton currently participates in the Planned Purchasing structure through its membership in the Vermont Public Power Supply Authority. Under the Planned Purchasing approach, VPPSA reviews Swanton's future market exposure (defined as its forecasted need for power, less amounts available through previously secured long-term contracts and generation) every six months.

Twice a year, in the spring and fall, Swanton has the opportunity to purchase a portion of its energy needs for future periods. By staggering the purchases, at any given point the market needs of Swanton are met by contracts purchased at different times resulting in less volatile power market prices. This is very similar to the concept of dollar cost averaging which is used in investing. As a result from contracting in even intervals Swanton's outstanding power portfolio needs are filled with a laddering effect. Contracts are small and layered at different intervals of time. This approach is beneficial because the utility will not have large breaks in coverage in the future.

The implementation of Planned Purchasing is structured and systematic but it does not remove the need for continual market monitoring and judgment. The goal is to use market monitoring and judgment to give the municipal systems the benefit of more favorable resource prices. In the event that market prices are below prices that will cause rates to be stable additional or longer purchase may be made instead of the normal duration. In the event that

unusually high prices prevail at the time of a planned purchase the purchase may be delayed. In general this approach deters attempts to 'time the market.'

The following table is a summary of anticipated resource transactions for 2011 through 2015:

Transaction	Volume	Term	Product	Explanation
McNeil Outage	0-2 mW	Up to 1 month	Energy	Purchases and/or sales to hedge load exposure during maintenance outage at prevailing market prices
Stony Brook displacement purchase	0-2 mW	Up to 1 month	Energy	Purchases and/or sales to displace Stony Brook if prevailing market conditions permit
Daily Transactions	0-6 mW	1-3 Days	Energy	Optimizing / hedging purchases and/or sales at prevailing market prices
Weekly Transactions	0-6 mW	1-2 Weeks	Energy	Optimizing / hedging purchases and/or sales at prevailing market prices
Monthly / Season Transactions	0-6 mW	1-3 Months	Energy	Optimizing / hedging purchases and/or sales at prevailing market prices
Planned Purchasing	0-6 mW	2-5 Years	Base Load Energy	Prevailing market price purchases and/or sales to hedge long-term energy needs not met by long term resources
Planned Purchasing	0-6 mW	2-5 Years	Peak Period Energy	Prevailing market price purchases and/or sales to hedge long-term energy needs not met by long term resources
Financial Transmission Rights	0-12 mW	Monthly and one year	FTR	Purchases and/or sales of FTR's to minimize congestion exposure or provide revenues to offset congestion charges
Capacity	Excess or short position	Monthly	Capacity	Excess or deficient capacity obligations will be settled at FCM transition price
Phase 1	0-3 mW	Up to 1 Year	Transmis sion	Short-term purchases and/or sales of unused transmission space to reduce costs
Renewable Energy Credits	Variable	Up to 5 Years	REC's	Purchases and/or sales of Renewable Energy Credits (RECs) to minimize generation costs
System Hydro Outage	0-10 mW	Up to 1 month	Energy	Purchase and/or sales to hedge load exposure during hydro maintenance outage at prevailing market prices
Financial Options	See Above	See Above	See Above	Financial options may be substituted for any of the above physical products

Swanton Village Municipal Utility Service Quality & Reliability Plan Reporting Form Report Period: January 1, 2010 - December 31, 2010

	Performance area	4th Quarte r	3rd Quarter	2nd Quarter	1st Quarter	Annual Rolling Average	Baseline
